ATHARVA PRABHU D15A 43

Experiment 3

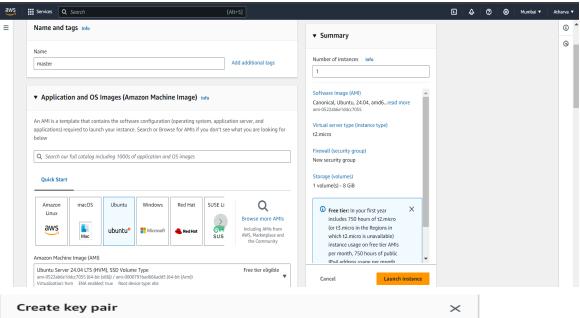

AIM:To understand the Kubernetes Cluster Architecture, install and Spin Up a Kubernetes Cluster on Linux Machines/Cloud Platforms.

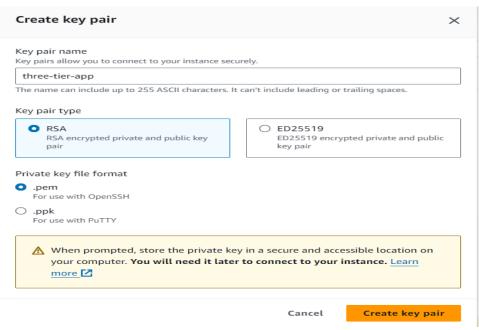

Step 1:Prerequisites

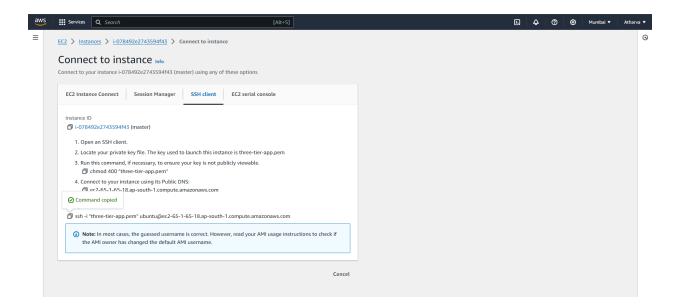

1.1 Create 3 EC2 instances, one for the master node and two for the worker nodes.

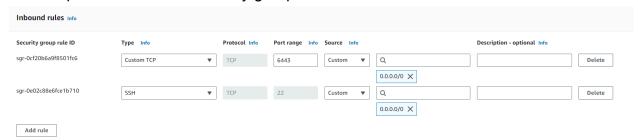

1.2 Proceed with the following settings and create a new key pair as follows(use the same key pair for all the three nodes)

1.3 Add port 6443 in each security group

1.4 After the instances have been created, copy the text given in the example part of each of the three instances into git bash.

```
C:\Users\Atharva\Downloads>ssh -i "three-tier-app.pem" ubuntu@ec2-65-1-65-18.ap-south-1.compute.amazonaws.com
Welcome to Ubuntu 24.04 LTS (GNU/Linux 6.8.0-1012-aws x86_64)
 * Documentation: https://help.ubuntu.com
 * Management: https://landscape.canonical.com

* Support: https://lubuntu.com/pro
 System information as of Sat Sep 21 10:50:19 UTC 2024
  System load: 0.11 Processes: Usage of /: 22.9% of 6.71GB Users logged in:
                                                             115
  Memory usage: 5% IPv4 address for enX0: 172.31.46.220
  Swap usage:
Expanded Security Maintenance for Applications is not enabled.
0 updates can be applied immediately
Enable ESM Apps to receive additional future security updates.
See https://ubuntu.com/esm or run: sudo pro status
The list of available updates is more than a week old.
To check for new updates run: sudo apt update
Last login: Sat Sep 21 10:44:19 2024 from 49.36.97.186
To run a command as administrator (user "root"), use "sudo <command>". See "man sudo_root" for details.
```

Step 2: Run the following commands on both the master and worker nodes to prepare them for kubeadm.

```
# disable swap
sudo swapoff -a
# Create the .conf file to load the modules at bootup
cat <<EOF | sudo tee /etc/modules-load.d/k8s.conf
overlay
br netfilter
EOF
sudo modprobe overlay
sudo modprobe br_netfilter
# sysctl params required by setup, params persist across reboots
cat <<EOF | sudo tee /etc/sysctl.d/k8s.conf
net.bridge.bridge-nf-call-iptables = 1
net.bridge.bridge-nf-call-ip6tables = 1
net.ipv4.ip forward
                             = 1
EOF
```

Apply sysctl params without reboot

sudo sysctl --system

```
## Install CRIO Runtime
sudo apt-get update -y
sudo apt-get install -y software-properties-common curl apt-transport-https
ca-certificates gpg
sudo curl -fsSL https://pkgs.k8s.io/addons:/cri-o:/prerelease:/main/deb/Release.key |
sudo gpg --dearmor -o /etc/apt/keyrings/cri-o-apt-keyring.gpg
echo "deb [signed-by=/etc/apt/keyrings/cri-o-apt-keyring.gpg]
https://pkgs.k8s.io/addons:/cri-o:/prerelease:/main/deb/ /" | sudo tee
/etc/apt/sources.list.d/cri-o.list
sudo apt-get update -y
sudo apt-get install -y cri-o
sudo systemctl daemon-reload
sudo systemctl enable crio --now
sudo systemctl start crio.service
echo "CRI runtime installed successfully"
# Add Kubernetes APT repository and install required packages
curl -fsSL https://pkgs.k8s.io/core:/stable:/v1.29/deb/Release.key | sudo gpg --dearmor
-o /etc/apt/keyrings/kubernetes-apt-keyring.gpg
echo 'deb [signed-by=/etc/apt/keyrings/kubernetes-apt-keyring.gpg]
https://pkgs.k8s.io/core:/stable:/v1.29/deb/ /' | sudo tee
/etc/apt/sources.list.d/kubernetes.list
sudo apt-get update -y
sudo apt-get install -y kubelet="1.29.0-*" kubectl="1.29.0-*" kubeadm="1.29.0-*"
sudo apt-get update -y
sudo apt-get install -y jq
```

sudo systemctl enable --now kubelet

sudo systemctl start kubelet

Step3: Run the above command only on master node

sudo kubeadm config images pull

sudo kubeadm init

mkdir -p "\$HOME"/.kube sudo cp -i /etc/kubernetes/admin.conf "\$HOME"/.kube/config sudo chown "\$(id -u)":"\$(id -g)" "\$HOME"/.kube/config

Network Plugin = calico kubectl apply -f https://raw.githubusercontent.com/projectcalico/calico/v3.26.0/manifests/calico.yaml

kubeadm token create --print-join-command

```
ubuntu@ip-172-31-46-220:~$ sudo kubeadm config images pull
      sudo kubeadm init
      # Network Plugin = calico
kubectl apply -f https://raw.githubusercontent.com/projectcalico/calico/v3.26.0/manifests/calico.yaml
### Internst Plugin = calico
| Numbert | Plugin = calico
|
```

You will get kubeadm token, Copy it.

Step 4: Run the above command only on worker nodes

sudo kubeadm reset pre-flight checks sudo your-token --v=5

```
ubuntu@ip-ir2-31-56-212:-$ sudo kubeadm reset pre-flight checks

WB921 11:14:17.713660 3933 preflight.go:56] [reset] WARNING: Changes made to this host by 'kubeadm init' or 'kubeadm join' will be reverted.

[reset] Are you sure you mant to proceed? [/N]: yes

[preflight] Running pre-flight checks

WB921 11:14:28.035200 3933 removeted:member.go:186] [reset] No kubeadm config, using etcd pod spec to get data directory

[reset] Deleted contents of the etcd data directory: /var/lib/etcd

[reset] Stopping the kubelet service

[reset] Unmounting mounted directories in "/var/lib/kubelet"

[reset] Deleting orients of directories: [/etc/kubernetes/manifests /var/lib/kubelet /etc/kubernetes/kubelet.conf /etc/kubernetes/bootstrap-kubelet.conf /etc/kubernetes/controller-manager.conf /etc/kubernetes/kubernetes/kubernetes/bootstrap-kubelet.conf /etc/kubernetes/controller-manager.conf /etc/kubernetes/kubernetes/kubernetes/bootstrap-kubelet.conf /etc/kubernetes/controller-manager.conf /etc/kubernetes/kubernetes/bootstrap-kubelet.conf /etc/kubernetes/controller-manager.conf /etc/kubernetes/kubernetes/bootstrap-kubelet.conf /etc/kubernetes/controller-manager.conf /etc/kubernetes/kubernetes/bootstrap-kubelet.conf /etc/kubernetes/controller-manager.conf /etc/kubernetes/kubernetes/kubernetes/kubernetes/bootstrap-kubelet.conf /etc/kubernetes/controller-manager.conf /etc/kubernetes/kubernetes/kubernetes/bootstrap-kubelet.conf /etc/kubernetes/controller-manager.conf /etc/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/kubernetes/ku
   The reset process does not clean CNI configuration. To do so, you must remove /etc/cni/net.d
 The reset process does not reset or clean up iptables rules or IPVS tables. If you wish to reset iptables, you must do so manually by using the "iptables" command.
 If your cluster was setup to utilize IPVS, run ipvsadm --clear (or similar) to reset your system's IPVS tables.
 The reset process does not clean your kubeconfig files and you must remove them manually
```

```
| Installs|| 177-11-2-217-3-3 | such laborate| | point | point
```

Step5: Run the given command to verify cluster creation

kubectl get nodes

```
ubuntu@ip-172-31-46-220:~$ kubectl get nodes
NAME
                        STATUS ROLES
                                                         AGE VERSION
ip-172-31-36-212 Ready <none>
ip-172-31-46-220 Ready control-plane
ip-172-31-47-26 Ready <none>
                                                         47s v1.29.0
                                                         16m v1.29.0
                                                         29s
                                                                 v1.29.0
```
